Protein Sequence Searches – February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (uniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

Seharaseyon, Jegatheesan Thursday, June 30, 2005 9:27 AM STIC-Biotech/ChemLib RE:09/658677

Sent: To: Subject:

Hi,

Please search SEQ ID NO: 2, 15 and 18 of 09/658,677 in the interference and commerical databases.

Thanks. Seyon.

98US-00072384.

Claim 1; Col 25-28; 26pp; English.

The invention relates to human Zsig13 proteins (AAB48972-B48974), and to DNA encoding them (AAC91782-C91784). The invention also relates to expression vectors and host cells comprising a human Zsig13 DNA, and the recombinant production of a human Zsig13 protein or its precursor. Zsig13 is a serine protesse, and has significant homology to Bacillus licheniformis glutamyl endopeptidase, human clotting factor X, human elastase, rat mast cell protease, Streptomyces griseus trypsin, bovine

trypsinogen, and Hypoderma lineatum collagenase. The gene encoding human Zsigl3 is located on chromosome 11q22.1. Zsigl3 is useful in industrial processes to degrade unwanted proteins or alter the characteristics of protein-containing compositions. It may also be used in industrial applications in which proteases are utilised, including food processing, brewing and alcohol production, and as a component of a laundry detergent. The present sequence represents a human Zsigl3 variant

                                                                                                                                                                                                                                                                                                                                         The invention relates to human Zsigl3 proteins (AAB48972-B48974), and to DNA encoding them (AAC91782-C91784). The invention also relates to expression vectors and host cells comprising a human Zsigl3 DNA, and the recombinant production of a human Zsigl3 protein or its precursor. Zsigl3 is a serine productson of a human Zsigl3 protein or its precursor. Zsigl3 licheniformis glutamyl endopeptidase, human clotting factor X, human elastase, rat mast cell protease, Streptomyces griseus trypsin, bovine trypsinogen, and Hypoderma lineatum collagenase. The gene encoding human Zsigl3 is located on chromosome 11q22.1. Zsigl3 is useful in industrial processes to degrade unwanted proteins or alter the characteristics of protein-containing compositions. It may also be used in industrial proteins in which proteases are utilised, including food processing, brewing and alcohol production, and as a component of a laundry detergent. The present sequence represents a human Zsigl3 variant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

```
This invention describes novel human transmembrane containing proteins and their encoding nucleic acids. Although no specific use is given for the proteins, they may have a range of activities selected from nutritional uses, cytokine and cell differentiation, immune stimulation/suppression, haemacopoissis regulatory, tissus growth, activin/inhibin, chemostatic/chemokinetic, haemostatic/thrombolytic, receptor/ligand, tumour inhibitor, anti-inflammatory and other undefined activities. The cDNAs can be utilized as probes for gene diagnosis and as gene sources for gene therapy. The cDNAs can also be used for large scale expression of proteins. The transformed cells can be used for detection of the corresponding ligands and for screening of novel low-molecular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             121 SGKSRRKRQIYGYDSRFSIFGKDFLLNYPFSTSVKLSTGCTGTLVAEXHVLTAAHCIHDG 180

This invention describes novel human transmembrane containing proteins and their encoding nucleic acids. Although no specific use is given for the proteins, they may have a range of activities selected from nutritional uses, cytokine and cell differentiation, immune stimulation/suppression, haematopoiesis regulatory, tissue growth, activin/inhibin, chemostatic/chemokinetic, haemostatic/thrombolytic, receptor/ligand, tumour inhibitor, anti-inflammatory and other undefined activities. The CDNAs can be utilized as probes for gene diagnosis and as gene sources for gene therapy. The CDNAs can also be used for large scale expression of proteins. The transformed cells can be used for large scale
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

AAV13344-403 represent secreted and transmembrane human proteins. The cDNA sequences are obtained from cDNA libraries, prepared from fetal Lung, fetal frains, fetal liver and fetal retina. The encoded polypeptides have specific uses based on their homology to known colypeptides, e.g. PRO211 and PRO217 can be used for disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions (e.g. enterocolitis, c.g. collinger-Ellison syndrome, gastrointestinal ulceration and congenital microvillus atrophy), skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell farctiona of the vulva and gliomas), potent effects on cell growth and development, diseases related to growth or survival of nerve cells including Parkinson's disease, Altheimer's disease, ALS, neuropathies or cancer. PRO265 can be used as for fibromodulin, e.g. for reducing dermal scarring. PRO264 can be used as a target for anti-tumor drugs. PRO533 may be used in the treatment of Usher Syndrome or Atrophia areats; PRO269 can be used as an anti-thrombotic agent; PRO287 polypeptides and portions may have therapeutic applications in wound healing and tissue repair; PRO317 can be used for treating problems of the kidney, uterus, endometrium, blood vessels, or related tissue, e.g. in the heart of genital tract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 MAGIPGLLFLLFFLLCAVGQVSPYSAPWKPTWPAYRLPVVLPQSTLNLAKPDFGAEAKLE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MAGI PGILIFILIFFILCAVGQVSPYSAPWKPTWPAYRLPVVLPQSTINLAKPDFGAEAKLE

TANGO polypeptides (which are either wholly secreted or transmembrane proteins) which can be used for gene therapy and/or vaccination. The proteins) which can be used for gene therapy and/or vaccination. The peptides are designated TANGO 180 to TANGO 189 and TANGO 215. The nucleic acids may be used to produce TANGO 180 to TANGO 189 and TANGO 215. The nucleic polypeptides according to standard recombinant DNA methodologies. They may also be used to detect and quantify the presence of TANGO nucleic acids in a sample and therefore identify or disgnose diseases associated with inappropriate TANGO expression (e.g. diseases related to over or under expression of the polypeptides or the expression of inactive onlypeptides). The nucleic acids and the polypeptides they encode may be used according to standard gene therapy protocols, to treat diseases associated with inappropriate TANGO expression by supplementing a patients own production of the polypeptide of to rectify mutations that patients own production of the polypeptide of to rectify mutations that polypeptides may also be used to identify and produce agonists and activity which may be used to modulate TANGO expression and activity which may be used to modulate TANGO expression and diseases. The polypeptides are
300
                                                                                                 300

ö
particularly useful for use as antigens for producing antibodies to TANGO proteins which may be used for inhibiting the activity of TANGO proteins. They may also be used to detect and quantify the presence of TANGO proteins in samples and therefore identify patients in whom the protein is over- or under-expressed. This sequence represents the human TANGO 186 protein described in the method of the invention

characterized by the contraining proteins HSPP-1 to HSPP-14. HSPPs have anticancer, anti-inflammatory, antimicrobial, nootropic, hepatotropic, cardiovascular and antiasthmatic activities, and can be used to meat or prevent disorders associated with facreased activity or function of HSPP. Antagonists of associated with decreased activity or function of HSPP. Antagonists of activity or function of HSPP. Such diseases include cell proliferation (including cancer), inflammation, cardiovascular, neurological, craproductive or developmental disorders, (e.g. arteriosclerosis, cirrhosis, psoriasis, acquired immune deficiency syndrome, anaemia, asthma, Crohn's disease, microbial or other infections, congestive or ischaemic heart disease, Alzheimer's, Parkinson's or Huntington's diseases, schizophrenia, ovulatory defects, muscular dystrophy). HSPP nucleic acids can be used for the recombinant production of HSPP, for detecting HSPP in standard hybridisation and amplification assays (for diseases) and monitoring, in gene therapy, as antisenses, triplex-forming or ribozyme therapeutics, for detecting related sequences or genetic variations, and for chromosomal mapping. HSPP are also used to raise specific antiabodies (Ab) and to screen for agonists and antagonists in competitive drug screens, and for purification of HSPP from natural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

AAY53622-43 represent bone marrow secreted proteins of human bone marrow stromal cells. The proteins can exhibit cytckine, cell proliferation, or cell differentiation activity (either inducing or inhibiting). They can be used to support colony forming cells or factor-dependent cell lines, to regulate hematopoiesis, and to treat myeloid or lymphoid cell adeliciencies. In addition, they may be used to support the growth and proliferation of erythroid progenitor cells, and to treat various anaemas. They can have colony stimulating factor (CSF) activity and can be used to support the growth and proliferation of myeloid cells such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              granulocytes, monocytes or macrophages, to prevent or treat myelo-
suppression, to support the growth and proliferation of megakaryocytes
and platelets, thereby allowing prevention or treatment of platelet
disorders such as thrombocytopenia, to support the growth and
proliferation of hematopoeitic stem cells, either in place of or in
conjunction with platelet transfusions, to treat stem cell disorders,
such as aplastic anaemia and paroxysmal nocturnal hemoglobinuria, or to
repopulate the stem cell compartment after irradiation or chemotherapy.
They can be used for growth or differentiation of bone, cartilage,
tendon, ligament, or nerve tissue, as well as for wound healing and
tissue repair and replacement, and in the treatment of burns, incisions

The present invention relates to 12 secreted human proteins and the nucleotide sequences encoding them. The polynucleotide sequences given in AAA80666-A80623 encode the 12 secreted protein sequences given in AAA80661-A80623 encode the 12 secreted proteins have various activities of the proteins include: immunosuppressant; anti-inflammatory; antiarthritic; antirheumatic, dermatological; antibroliferative; antiarthritic; antirheumatic, dermatological; antibroliferative; and antifungal activity. The proteins, polypeptides, agonists and conditions examples of which include: immune disorders e.g. antagonists may be used to treat prevent and/or diagnose various disease, disorders and conditions examples of which include: immune disorders e.g. Addison's disease, rheumatoid arthritis, dermatitis, and multiple c.g. colerosis, inflammatory bowel disease,

Crohn's disease and nephritis; hyperproliferative disorders such as paraproteinaemias and purpura; cardiovascular disorders e.g. coronary creatiosclerosis and mypura; cardiovascular disorders e.g. coronary arteriosclerosis and mypura; cardiovascular disorders e.g. coronary creatment of infectious diseases. The human secreted protein gene to melanome and lymphoma. The proteins and polynucleotide sequences may also be used in wound healing and protein sequences may also be used in wound healing cand the treatment of infectious diseases. The human secreted protein gene #10 and protein gene #10 is located on chromosome 12.

Sequences AAA83616-B25618 represent alternative secreted protein the
                                      for the prevention, amelioration and treatment of autoimmune, inflammatory, hyperproliferative and cardiovascular disorders, cancer, wounds, and infectious diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

The present invention relates to 12 secreted human proteins and the nucleotide sequences encoding them. The polynucleotide sequences given in AAAB05576-B05593 encode the 12 secreted proteins have various activities of the human secreted proteins have various activities of the proteins include: immunosuppressant, anti-inflammatory; antiarthritic; antirhemmatic, dermatclogical; antiproliferative; antiarthritic; antirhemmatic, dermatclogical; antiviral; antibacterial; antiarthritic; antirhemmatic, dermatclogical; antiviral; antibacterial; antiarthritic; antirhemmatic, dermatclogical; antiviral; antibacterial; antiarthritic; antirhemmatic, dermatclogical; antidammatory; and antifungal activity. The proteins, polypeptides, agonists and conditions examples of which include: immune disorders e.g. disorders and conditions examples of which include: immune disorders e.g. Addison's disease, rheumatory disorders e.g. inflammatory bowel disease, crohn's disease and nephritis; hyperproliferative disorders such as paraproteinaemias and purpura; cardiovascular disorders such as pareproteins and polymucleotide sequences may also be used in wound healing and the treatment of infectious diseases. The human secreted protein gene 20 protein sequences and AAAB05568. Secreted protein gene #10 is located on chromosome 12.

Sequences AAB25566-B25618 represent genes which are related to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated nucleic acid molecules encoding human secreted proteins are used for the prevention, amelioration and treatment of autoimmune, inflammatory, hyperproliferative and cardiovascular disorders, cancer, wounds, and infectious diseases.
                                                                                                                                                   antirheumātic, dermatological; antiproliferative; antiarteriosclerotic; antidancer; vulnorary; antiviral; antibacterial; antiviral; antibacterial; antiviral; antibacterial; dermatori; immune disorder; Addison's disease; rheumatoid archritis; dermatitis; multiple sclerosis; inflammatory disorder; inflammatory bowel disease; crohn's disease, nephritis, hyperproliferative disorder; cardiovascular disorder; cornary arteriosclerosis; myocarditis; cancer; melanoma; lymphoma; wound healing; human; chromosome 12.

The present sequence is one of sixty one novel secreted and transmembrane PRO polypeptides are useful for treating skin diseases (e.g. psoriasis), cancers (e.g. lung squamous cell carcinoma), gastrointestinal disorders (e.g. enterocolitis), neurodegenerative diseases (e.g. Alzheimer's diseases, parkinson's disease), wound repair, cardiovascular disorders (e.g. endometrial bleeding angiogenesis, ischaemlas such as coronary ischaemla, atherosclerosis), inflammatory disorders (e.g. asthma, rheumatoid arthritis, multiple sclerosis), inflammatory pigmentosum. The PRO nucleic acids have applications in molecular biology, including use as hybridization probes, and in chromosome and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human Zsigl3 proteins (AAB48972-B48974), and to DNA encoding them (AAC91782-C91784). The invention also relates to expression vectors and host cells comprising a human Zsigl3 DNA, and the recombinant production of a human Zsigl3 protein or its precursor. Zsigl3 is a serine protease, and has significant homology to Bacillus licheniformis glutamyl endopeptidase, human clotting factor X, human elastase, rat mast cell protease, Streptomyces griseus trypsin, bovine trypsinogen, and Hypoderma lineatum collagenase. The gene encoding human Zsigl3 is located on chromosome 1122:1. Zsigl3 is useful in industrial processes to degrade unwanted proteins or alter the characteristics of protein-containing compositions. It may also be used in industrial applications in which proteases are utilised, including food processing, brewing and alcohol production, and as a component of a laundry detergent. The present sequence represents a human Zsigl3 variant

                                                                       요
                                                                                                                                                                                                                                                                                                                                                                                                                                     The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of detect the presence of a tumour in a mammal by comparing the level of and a control sample of normal cells, whereby a higher level of and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TMP) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also breast, prostate, rectal, cervical, or liver tumours, in mammalian cubjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                  Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumors, such as prostate and breast tumors, in mammals and to screen for modulators of the compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240
